IT Policy

Making the Case for Computing

Seeking funding for current and future computing initiatives requires both a strong argument and a broad community of supporters.

WHEN IT COMES to distributing trillions in U.S. taxpayer dollars, funding for science joins a crowded field of special interests where competition for federal funding is fierce. Policymakers are ultimately stewards of taxpayer dollars and must make judgments about the areas in which government has a legitimate reason to invest. And because tax dollars are not limitless, policymakers must prioritize federal investments, deciding which programs or which agencies have the most compelling need for funding.

Consequently, every special interest—from researchers to road-

builders, health care professionals to hovercraft manufacturers—has an advocacy group urging policymakers to focus federal investment in their particular area. What ties all of these groups together is the need to have a story—a case to make to Congress, the Administration and the American people—that justifies the expenditure of those tax dollars on the things they care about.

Funding Decisions

The stakes are high. Last year (fiscal year 2009), the U.S. discretionary budget—that is, the amount not automatically committed to federal programs like Social Security or Medicare—was

just over \$1 trillion. Congress spent that money, as it does every year, by parceling it out to federal agencies and programs in 12 separate pieces of legislation. This is quite literally a zero-sum game. Aggregate spending by Congress is capped, and each of these 12 appropriations bills has its own spending cap. This means that once the spending caps are reached—and they always are—any additional increase in spending for one program must be offset by an equal reduction in another program.

As a result, policymakers find the need to invest in fundamental research in competition with the need to fund agricultural subsidies, or the

Government funding for computing research is tight and the competition plentiful. A new infrastructure for computational oceanography incorporating the VisTrails system created by the University of Utah was among the scientific projects receiving support from The National Science Foundation's Cluster Exploratory (CluE) program in 2009.

GAC's Mission

Develop a deeper understanding of policy issues and their impact, and work for informed policies involving computing research and computing technology in general.

- Influence policy related to computing research by improving public and policy maker understanding of the nature and role of such research.
- Increase the computing community's awareness of and participation in policy issues.

Goal

Become the “organization of record” for
computing research policy issues

We're part of an active computing policy community

The image displays four overlapping web browser windows:

- Top-Left:** Twitter profile for the White House Office (@whitehouseostp). The header reads "Get short, timely messages from OSTP." and includes a "Sign Up" button.
- Top-Right:** The OpenSecrets.org homepage. The main heading is "OpenSecrets.org Center for Responsive Politics". It features a navigation menu with categories like "Politicians & Elections", "Influence & Lobbying", and "News & Analysis". A prominent banner reads "Discover how oil company BP plays politics".
- Bottom-Left:** The NSF FastLane website. The header says "FastLane is an interactive real-time system used to conduct NSF business over the Internet." It includes a "Quick Link" section with items like "Registration Information" and "Award Search and Funding Trends".
- Bottom-Right:** A detailed article on OpenSecrets.org. The title is "Discover how oil company BP plays politics". The text discusses the political influence of BP and mentions a report released by the Center for Responsive Politics and Public Citizen.

...how government functions...

...how we preserve our national security...

...how we communicate...

...and how we're entertained.

There's a compelling economic case

- Computing drives our economy, not just through the growth of the IT industry, but also through productivity gains across the entire economy
- Remarkable economic growth between '95 and '02 was spurred by productivity growth enabled almost completely by factors related to IT¹
- IT enables productivity growth, enables the economy to run at full capacity, enables goods to be allocated more efficiently and the production of higher quality goods and services²

1. Jorgenson, Dale W., Mus S. Ho, and Kevin J. Stiroh. Productivity, Volume 3: Information Technology and the American Growth Resurgence. MIT Press. 2005.

2. Atkinson, Robert D., Andrew S. McKay. Digital Prosperity: Understanding the Economic Benefits of the Information Technology Revolution. Information Technology and Innovation Foundation. 2007.

Advances in computing are enabling innovation in all other fields...

In Science and Engineering...

Created by Matthew Hall of NCSA's Advanced Visualization Laboratory

Computer modeling, visualization and data analysis have joined observation, theory, and experiment as the drivers of scientific discovery.

And advances in computing continue unabated...

The history is compelling, but the future opportunities are even more compelling:

- The future of networking
- Revolutionizing transportation
- Delivering personalized education
- Enabling the smart grid
- Empowering the developing world
- Improving health care
- Driving advances in *all* fields of S&E

It's impossible to imagine a field with greater
opportunity to change the world

So why is this a concern for federal policymakers?

Federal research is at the heart of the IT R&D Ecosystem

“ [An] extraordinarily productive interplay of federally funded university research, federally and privately funded industrial research, and entrepreneurial companies founded and staffed by people who moved back and forth between universities and industry.”

-NRC on the federal IT R&D Program

Essentially every aspect of IT on which we rely today
bears the stamp of federal support.

So, we have a pretty compelling story.
How do we use it?

We're opportunistic...

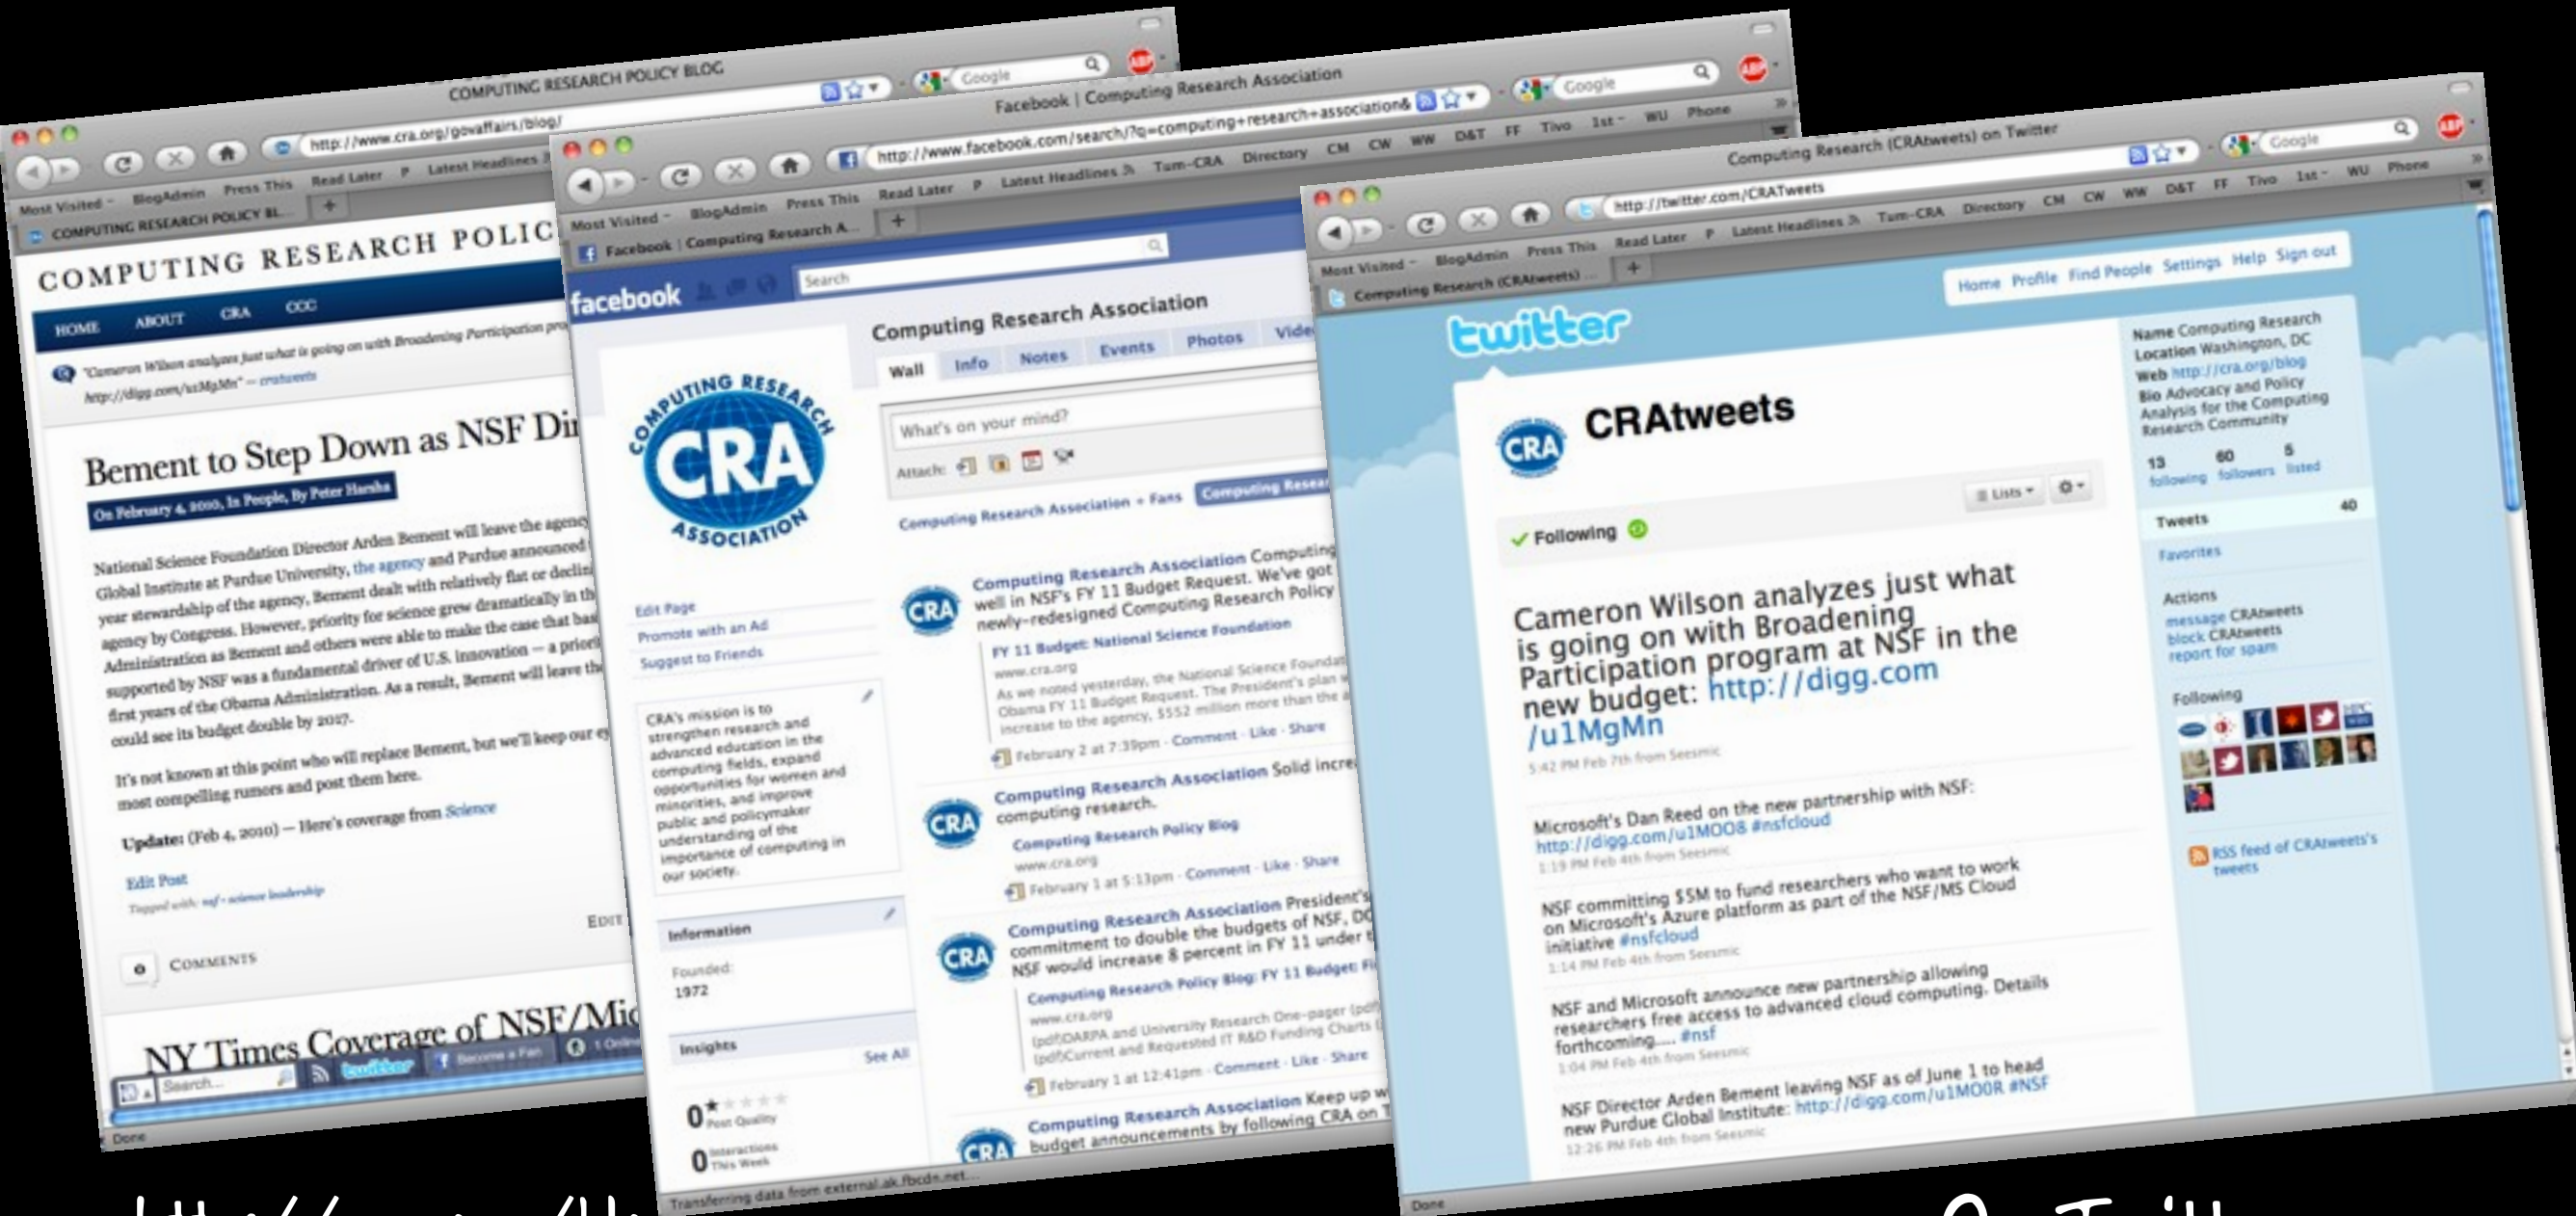

- Congressional testimony
- We host our own events and partner with others
- We've developed a "good brand"
- We strive to engage the community in policymaking

We're opportunistic...

- Part of a broader science advocacy community that's looking for good stories to tell
 - Join coalitions around our interests
 - CNSF, CNSR, TFAI, ESC, AHPDM
- We leverage our interactions with the press

We're opportunistic...

- We leverage new media (or try to)

<http://cra.org/blog>

On Facebook

On Twitter
@CRATweets

We're opportunistic...

- Try to use events like Snowbird to reach out to our own community and to policymakers

And we've had reasonable success.

Where do we stand now?

Good news first...

Science agencies fared OK in FY10 Approps

FY 2010 Funding for Some Key Science Agencies (in millions)

Agency	FY 09 Estimate	FY 10 Request	FY 10 Conference	\$ change	%change

111TH CONGRESS
2D SESSION

H. R. 5116

IN THE SENATE OF THE UNITED STATES

JUNE 9, 2010

Received

JUNE 29, 2010

Read twice and referred to the Committee on Commerce, Science, and
Transportation

AN ACT

To invest in innovation through research and development,
to improve the competitiveness of the United States,
and for other purposes.

- 1 *Be it enacted by the Senate and House of Representa-*
- 2 *tives of the United States of America in Congress assembled,*

Case study:
America COMPETES
Reauthorization of 2010

Reauthorization goes a bit beyond the original bill:

- Authorization increases from 3 to 5 years
- Includes NITRD and NNI bills
- Includes new programs to bolster Industrial Innovation
- Rate of increase “steeper”

“I remain committed to the underlying goals of the America COMPETES Act and believe that we should continue to prioritize investments in basic research and science, technology, engineering, and mathematics (STEM) education. However, this bill spends too much money and goes far beyond the original intent and scope of the COMPETES legislation.”

-Rep. Ralph Hall (R-TX), Ranking Member, House S&T Committee

Grassley Launches Inquiry Into Reports Alleging Fed Computers Used to View Porn

Published January 28, 2009 | FOXNews.com

Print Email Share Recommend

The ranking member of the Senate Finance Committee launched an inquiry Tuesday into reports that National Science Foundation officials are using government computers to view pornographic Web sites during working hours.

In a letter sent to the NSF's inspector general Tuesday, Chuck Grassley requested access to all documents related to the "numerous reports" and seven investigations into "Abuse of NSF IT Resources" -- which are referenced in the agency's 68-page semi-annual report.

In one instance, the report cites an NSF "senior official" who allegedly spent 20 percent of his work hours "viewing sexually explicit" Web sites -- amounting to a potential loss of \$58,000 in employee compensation.

Grassley has asked the NSF to disclose all "specific reports of investigations, audit reports, evaluations and information supporting the examination of the NSF network drive" by Thursday to "ensure that NSF

Hall crafts "Motion to Recommit With Instructions"

- Eliminates "duplicative" programs
- Reduces authorization to 3 years
- Freezes agency budgets unless "budget is balanced"
- Adds some veterans benefit language
- Prohibits agencies from paying the salaries of any federal workers disciplined for viewing pornography on federal computers

Do you believe a few days suspension is “good enough” for federal workers who waste taxpayer dollars looking at pornography on the job?

Congressman Cole does.

Vote John Doe in November!

“Every body raise your hand that’s for pornography. Come on, raise your hand. Nobody? Nobody is for pornography? Well, I’m shocked. So I guess we need this little bitty provision that means nothing. That’s going to gut the entire bill. This is an embarrassment, and if you vote for this, you should be embarrassed.”

-Rep. Bart Gordon (D-TN), Chair of the House Science and Technology Committee and sponsor of H.R. 5116

Gordon's Revenge

- Reintroduces *COMPETES* a few days later with minor changes (including anti-porn language), calls it a "Jobs Bill"
- Wants to force Republicans to be "anti-Jobs"
- Uses "Suspension of the Rules," loses vote (expectedly)
- Berates Republicans for killing U.S. jobs

Gordon's Revenge

- Reintroduces the original COMPETES Reauthorization
- Brings up the Motion to Recommit
- Asks the Chair to “Divide the Question”
- Dems defeat all the controversial measures, pass the anti-porn language
- COMPETES Reauthorization finally passes

On to the Senate for **COMPETES**

What happens next?

- Appropriations won't get done in regular order
- Headed for a Continuing Resolution
- Likely resolved with an Omnibus - When?

Turnover among some key Members

Vern Ehlers (R-MI)

Bart Gordon (D-TN)

David Obey (D-WI)

Brian Baird (D-WA)

Bob Inglis (R-SC)

Alan Mollohan (D-WV)

Nation Demands Tax Dollars Only Be Wasted On Stuff That's Awesome

JULY 13, 2010 | ISSUE 46-28

Protesters called on Congress to redirect excess spending toward the development of robotic bees equipped with live-streaming night vision.

WASHINGTON — Acknowledging that the outrageous misappropriation of public funds is inevitable, an estimated 500,000 Americans gathered in the nation's capital Sunday to demand their misused tax dollars at least be squandered on something really awesome that everyone can enjoy.

Protestors from every state in the union voiced concerns that the federal government is misusing its wasteful spending on special interests, bloated no-bid contracts, and other

ECONOMY

Growth in Mandatory Spending vs. Discretionary

Discretionary Mandatory Net Interest

The situation was competitive when deficits were in the billions...

Without a strong case and support from a broad community – industry, higher education, scientific societies – research funding and the innovations it enables will face a chilly reception among policymakers

What else are we looking to do?

- Improve opportunities at other mission agencies
- Improve the pathway to funded initiatives
- Make sure the community is represented on advisory boards and in national initiatives
- Continue to support our partners

We're looking for your help, too.

(you knew that was coming)

Join the Computing Research Advocacy Network (CRAN)

<http://www.cra.org/govaffairs/advocacy/cran/>

Get “Action Alerts” and updates from CRA staff
so you don’t miss important opportunities to speak
out on behalf of computing research

A Proposal:

Congressional Visits Day Fly-in

Computer Science

EDUCATION WEEK

csedweek.org

With your help, we'll continue to make the case for computing research wherever we can.

Thanks!
